

CHEMISTRY OF COMPLEX EQUILIBRIA

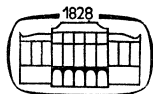

M. T. BECK D. Sc.

*Professor of Physical Chemistry
Kossuth Lajos University
Debrecen (Hungary)*

Translation Editor:

R. A. CHALMERS

*Department of Chemistry
University of Aberdeen*

AKADÉMIAI KIADÓ, BUDAPEST 1970

CONTENTS

CHAPTER 1 INTRODUCTION	13
References	18
CHAPTER 2 COMPLEX EQUILIBRIA AND EQUILIBRIUM CONSTANTS	19
2.1 Types of complex equilibria in solution	19
2.2 Types of complex equilibrium constants	22
2.3 Equilibrium constants involving concentrations and activities	26
References	31
CHAPTER 3 THE COMPLEX FORMATION FUNCTION	32
3.1 Basic principles	32
3.2 Statistical considerations	33
3.3 Particular values of the complex formation function	38
3.3.1 Half-values of the formation function	38
3.3.2 Integer values of the formation function	45
References	46
CHAPTER 4 NUMERICAL AND GRAPHICAL METHODS FOR CALCULATION OF COMPLEX STABILITY CONSTANTS	48
4.1 Methods based on the half-values	48
4.2 Correction methods	51
4.3 Graphical methods	55
4.3.1 Linear extrapolation	56
4.3.2 Elimination method	61
4.3.3 Curve-fitting methods	63
4.4 Numerical methods	67
4.5 Application of high-speed computers	68
4.6 Calculation of stability constants based on the relative concentration changes of the different species	70
4.7 Calculation of the concentration of different species from the stability constants and total concentrations	73
References	81
CHAPTER 5 EXPERIMENTAL METHODS FOR THE DETERMINATION OF STABILITY CONSTANTS	83
5.1 The measurement of colligative properties	84
5.2 Optical methods	85
5.2.1 The method of continuous variation	86
5.2.2 The mole-ratio methods	89

5.2.3	The dilution method	91
5.2.4	Determination of the stability constant of complexes of composition MeL	91
5.2.5	Determination of the stability constants in the case of successive complex formation	93
5.2.6	The method of corresponding solutions	97
5.2.7	The study of competing reactions	100
5.2.8	Infrared spectrophotometry	101
5.2.9	Raman spectroscopy	101
5.2.10	Optical rotatory power	102
5.3	Calorimetry	104
5.4	Measurements based on reaction kinetics	107
5.4.1	Stoichiometric reactions	107
5.4.2	Catalytic reactions	108
5.4.2.1	Catalysis by ligand	108
5.4.2.2	Catalysis by metal ions and metal complexes	109
5.4.2.3	Central ion exchange reactions	110
5.4.3	The kinetic approach to structural problems	111
5.5	Liquid-liquid partition	111
5.5.1	Distribution of the ligand	113
5.5.2	Distribution of metal complexes	113
5.5.3	Synergism	116
5.5.4	Competitive reactions	118
5.6	Solubility measurements	118
5.6.1	Calculation of constants from the solubility minimum	119
5.6.2	Calculation of the stability constants from the solubility curve	119
5.7	Ion-exchange measurements	121
5.7.1	Application of cation-exchange resins	122
5.7.2	Application of anion-exchange resins	124
5.7.3	Study of complexes with neutral ligands	124
5.7.4	Application of liquid exchangers	125
5.7.5	Study of the Donnan membrane equilibrium	126
5.8	Potentiometric methods	127
5.8.1	Determination of metal ion concentrations	127
5.8.2	Determination of ligand concentrations	130
5.8.3	Determination of hydrogen ion concentration	131
5.9	Polarographic measurements	133
5.9.1	Measurement of the shift of the half-wave potential	134
5.9.2	Measurement of the current	135
5.9.3	Chronopotentiometry	135
5.10	Miscellaneous methods	136
5.10.1	Conductivity measurements	136
5.10.2	Nuclear magnetic resonance studies	136
5.10.3	Gas chromatography	137
5.10.4	Density of solutions	137
5.10.5	Measurement of surface tension and viscosity	137
	References	138
	CHAPTER 6 THE PROTONATION OF COMPLEXES	145
6.1	Protonation of complexes of unidentate ligands	145
6.2	Protonation of complexes of multidentate ligands	145

6.2.1 The protonation scheme of free ligands	146
6.2.2 Protonation of 1 : 1 metal chelates	149
6.2.3 Protonation of metal chelates in general	151
6.3 Protonation schemes of metal chelates	158
6.4 The kinetic importance of the protonation of complexes	162
6.4.1 The role of protonation in the formation and decomposition of metal chelates	162
6.4.2 The effect of protonation in redox reactions	162
6.4.3 The effect of protonation on ligand reactivity	163
References	163
CHAPTER 7 FORMATION AND STABILITY OF AQUO-COMPLEXES	165
7.1 Hydration of ions	166
7.2 Stability constants of aquo-complexes	167
References	171
CHAPTER 8 MIXED LIGAND COMPLEXES	172
8.1 Some relationships between equilibrium constants of mixed ligand complexes	174
8.2 Study of reactions of the type $i\text{MeA}_h + j\text{MeB}_h \rightleftharpoons h\text{MeA}_i\text{B}_j$	175
8.2.1 $\text{MeA}_2 + \text{MeB}_2$ system	175
8.2.2 $\text{MeA}_3 + \text{MeB}_3$ system	181
8.2.3 $\text{MeA}_4 + \text{MeB}_4$ system	184
8.2.4 Distribution of the different complexes	184
8.3 Study of mixed ligand complexes of the type $\text{MeA}_i\text{B}_{N-i}$	186
8.3.1 Spectrophotometric determination of the equilibrium constants	186
8.3.2 Distribution of the complexes	190
8.4 Potentiometric study of mixed ligand complexes	191
8.4.1 Study of mixed complexes of ligands of very different basicity	191
8.4.2 General treatment of the mixed complexes of basic ligands	192
8.4.3 Distribution of complexes	194
8.5 Mixed ligand complexes of low co-ordination level	194
8.6 Mixed ligand complexes of aminopolycarboxylic acids	195
8.7 Formation of mixed ligand complexes by the expansion of the co-ordination sphere	197
8.8 General methods for the study of the formation of mixed ligand complexes	198
8.9 Mixed complex formation in the liquid-liquid extraction of metal ions	199
8.10 Complexes with three different ligands	199
8.11 Factors determining the stability of mixed ligand complexes	199
8.12 The kinetic importance of mixed ligand complexes	202
8.13 Analytical application of mixed ligand complexes	207
References	209
CHAPTER 9 COMPLEXES OF THE OUTER-SPHERE TYPE	212
9.1 Detection of outer-sphere complex formation and determination of stability constants	213
9.1.1 Experimental methods in the study of inert complexes	213
9.1.2 Data referring to inert complexes	215
9.1.3 Study of labile complexes	215
9.2 Stability of outer-sphere complexes	216
9.3 Kinetic role of outer-sphere complexes	218
9.4 Analytical applications of outer-sphere complexes	219
References	220

CHAPTER 10 POLYNUCLEAR COMPLEXES	§	222
10.1 Some general problems in the calculation of stability constants of polynuclear complexes		224
10.2 Polynuclear complexes with monatomic bridges		225
10.2.1 Formation of polynuclear complexes in the hydrolysis of metal ions		225
10.2.2 Polynuclear complexes with monatomic bridges other than oxygen		226
10.3 Polynuclear complexes with oligoatomic bridges		227
10.4 Polynuclear complexes with multidentate ligands		228
10.5 Polynuclear complexes involving central ions of the same atomic number but of different oxidation state		232
10.6 Polymerization of metal chelates		234
10.7 Distribution of polynuclear complexes		235
10.8 Kinetic importance of polynuclear complexes		236
References		237
CHAPTER 11 FACTORS INFLUENCING AND DETERMINING THE STABILITY CONSTANTS OF METAL COMPLEXES		240
11.1 Critical evaluation of stability constants		240
11.2 Effect of external factors on the stability constants		243
11.2.1 Effect of pressure		243
11.2.2 Effect of temperature		243
11.2.3 Effect of dielectric constant		244
11.2.4 Effect of ionic strength and ionic medium		245
11.3 Relationships between the properties of central ions and ligands and the stability constants of complexes		246
11.3.1 Relationships between the properties of the central ion and the stability of complexes		246
11.3.1.1 The ionic radius		246
11.3.1.2 The ionization potential and electronegativity		247
11.3.1.3 The electronic configuration of the central ion		249
11.3.1.4 Classification of the central ions according to the periodic table		252
11.3.1.5 Comparison of the stability constants of complexes of different ligands with two central ions		253
11.3.2 Correlations between the properties of a ligand and the stability of its metal complexes		256
11.3.2.1 Nature of the donor atom		256
11.3.2.2 Correlations between the basicity of the ligand and the stability of complexes		256
11.3.2.3 Comparison of the stability constants of the complexes of two similar ligands formed with a number of metal ions		259
11.3.2.4 Effects of structural changes and steric factors		260
11.3.2.5 Effect of chelate formation on the stability of complexes		262
References		266
