

Improvement of the Sugar Beet in the United States

G. H. COONS, F. V. OWEN, AND DEWEY STEWART

*Agricultural Research Service, U. S. Department of Agriculture,
Beltsville, Maryland*

CONTENTS

	<i>Page</i>
I. Introduction	90
II. The Development of the Sugar Beet in Europe	90
1. Early History.	90
2. The White Silesian Beet	91
3. Vilmorin and the Sugar Beet	92
4. Sugar Beet Breeding Establishments	94
5. European Sugar Beet Breeding Methods	94
III. The Sugar Beet in the United States	96
1. Early Attempts to Establish Beet Sugar Industry	96
2. Beet Sugar Industry Becomes Established	96
3. The Sugar Beet Threatened by Disease and Insect Attack	97
IV. Breeding for Disease Resistance	100
1. Resistance to Curly Top.	100
2. Cercospora Leaf Spot	104
a. Resistant Inbreds	104
b. Resistant Varieties	106
c. New Sources of Resistance	108
3. Downy Mildew and Rust Resistance, Nonbolting Tendency, Com- bined with Curly Top Resistance	108
4. Black Root Resistance	111
a. Resistance to Disease Complex Found	111
b. Development of US 400 and Other Black-Root-Resistant Varieties	112
5. Varieties Combining Leaf Spot and Curly Top Resistance	114
6. Contributions of the Breeding Program	114
7. Other Serious Disease Problems	116
V. Sugar Beet Improvement Entering New Era	117
1. Basic Information Available to Breeders	117
2. Polycross Method Applicable in Breeding Sugar Beets	118
3. Application of Other Breeding Methods	119
4. Heterosis	120
5. Male-Sterility in Sugar Beets	122
6. Monogerm Sugar Beets	125
7. Bolting	127
8. Polyploidy	128
VI. New Sources of Genes	131
1. Cultivated Beets, <i>Beta vulgaris</i> L.	131
