of Minnesota, St. Paul, Minnesota; Texas A. and M. College, College
Station, Texas; Mississippi State College, State College, Mississippi;
and Ohio State University, Columbus, Ohio*

CONTENTS

	<i>Page</i>
I. Introduction	2
II. Formation and Stabilization of Aggregates	3
1. Definition	3
2. Mechanisms Involved in Aggregation	5
3. Formation of Aggregates	9
4. Stabilization	10
5. Iron and Aluminum Oxides	11
III. Effect of Organic Residues on Aggregation	12
1. Microbial Decomposition	12
2. Influence of Kind and Amount of Organic Material	14
3. Influence of Environmental Conditions	16
IV. Effect of Microbial Species on Aggregation	18
V. Nature of Organic Soil-Binding Substances	18
1. Polysaccharides	19
2. Other Organic Substances	21
VI. Synthetic Soil Conditioners	22
1. Nature of Materials Used	22
2. Factors Influencing Polymer Effectiveness	23
3. Persistence in Soil	25
4. Comparison with Natural Organic Binding Substances	25
5. Effect on Plant Growth	26
6. Effect on Microbial Activity	28
VII. Mechanism of Soil-Binding Action by Organic Substances	28
VIII. Influence of Exchangeable Cations on Aggregation	30
1. Calcium versus Hydrogen	30
2. Exchangeable Cations in General	31
3. Effect on Natural and Synthetic Soil Conditioner Substances	32
IX. Water Penetration under Prolonged Submergence	33
X. Summary and Conclusions	34
