

## Subject Index

### A

Alkali atom, term values of spectrum of, 138

Alkali metals, cohesive energy, 98, 187

compressibility, 187

conductivity, effect of electronic interaction on, 414

$\eta$  defect for, 158-159

diamagnetic susceptibility (orbital), 425

electronic specific heat, effect of electronic interactions on, 408-409

energy levels, 178-181

evaluation of quantum defect for, 158

ground state energy, 139, 185

lattice constant, 187

plasma frequency, 404

quantum defect data, polarization corrections to, 182-184

unmodified, 178-181

thermoelectric power, effect of electronic interactions on, 414

Alkali spectra, doublet inversion in, 176

Alkaline earth metals, cohesive energy, 103, 117

Aluminum, band width, 411

cohesive energy of the monatomic solid, 108

plasma frequency, 404

Aluminum iron alloys, specific heat anomaly of  $\text{AlFe}_3$ , 271

Angular correlation, of electrons relative to nucleus, 104

Angular momentum, radial differential equation for, 136

Antimony, cohesive energy of the monatomic solid, 108

Argon, cohesive energy of the monatomic solid, 108

Arsenic, cohesive energy of the monatomic solid, 108

Atomic density, effect of filling of  $d$  band on, 118

Atomic number, relation to cohesive energy, 107

Augmented plane waves, method of, 84-85, 143-144

### B

Band width, of metals, 411

Barium, cohesive energy of the monatomic solid, 108

Beryllium, band width, 411

cohesive energy, 108, 121

plasma frequency, 404

Bethe's theory, for AB alloys, 222-226

results, 216-217, 225-226

Binding in metals, dependence on number of  $p$  and  $d$  electrons, 105

Bismuth, cohesive energy of the monatomic solid, 108

Bloch function, applicability of QDM to calculation of, 171-173

Bloch method, comparison with Heitler-London method, 13

for evaluating energy levels in solid, 46

for solution of Hartree and Fock equations, 12-13

Bloch wave, 20

Body-centered cubic lattice, Brillouin zones for, 36-37, 109

energy levels for  $p$ -bands, 52

energy levels for  $s$ -state, 49-50

$p$ -band, 109

Boron, cohesive energy of the monatomic solid, 108
