Cell Biology Laboratory Manual

University of Debrecen
Medical and Health Science Center

Department of Biophysics and Cell Biology

Zsolt Bacsó
Péter Nagy
Mózes Péter
Tamás Varga
György Vereb

Edited by György Vereb

2009

Contents

<i>Studying the physical and chemical processes leading to cell death</i>5 (Péter Nagy)	
Mechanism of cell death5	
Investigation of the viability of cells9	
Tasks to be preformed12	
Stock solutions.....12	
Protocol.....12	
<i>Separation of lymphocytes and granulocytes, Feulgen stain</i>14 (Mózes Péter)	
The main constituents of blood14	
Separation of lymphocytes and granulocytes14	
Feulgen-staining16	
Tasks to be performed - practical instructions16	
I. Necessary calculations.....16	
II. Separation of lymphocytes and granulocytes.....16	
III. Determining the cell concentration:.....17	
IV. Smear preparation and staining.....19	
<i>Luminescent labelling and microscopic detection of cellular components</i>20 (György Vereb)	
Basic principles of microscopy20	
Magnification, resolution and visibility.....21	
Aberrations.....22	
Illumination in the microscope.....23	
Some important types of microscopes.....23	
Microscopic methods in the investigation of cellular and molecular systems – an outline26	
I. Investigation of biological effects of various substances on cells.....26	
II. Classification of Microscopies.....26	
III. Major parts of the compound microscope (in order of light path).....27	
IV. Image formation by the compound microscope.....27	
V. Modalities of image formation in classical microscopies.....27	
VI. Comparison of Fluorescence and transmission (absorption) image formation.....27	
VII. Selected application of fluorescence microscopy.....28	
VIII. Resolving power.....28	

Labelling techniques in fluorescence microscopy	30
Labelling with antibodies.....	30
Labelling with toxins and other specific molecules.....	31
Labelling with substrate and ligand.....	31
Labelling with substrate and ligand.....	32
Dyes of nucleic acids (DNA and RNA dyes).....	32
Sequence-specific nucleic acid probes.....	33
Indirect labelling.....	34
Targeting the probes to the labelled molecular entities.....	35
Tasks to be performed and specific background: Fluorescent labelling of A431 epidermoid carcinoma cells	36
Targets to be visualised are:.....	36
Tasks to be performed in the lab.....	39
<i>Examination of the supercoiled loops of eucaryotic chromatin and the nuclear “halo”</i>	42
(Tamás Varga)	
Structure of the Chromatin	42
The Nuclear Halo.....	43
The superhelical structure of DNA.....	43
Tasks to be performed in the lab - protocol	44
<i>Examination of DNA damage</i>	46
(Zsolt Bacsó)	
DNA strand breaks	46
Comet assay	46
Quantitation of DNA damage in single cells	49
Effect of etoposide and apoptosis on DNA	49
Tasks to be performed in the lab	50
The aim of this experiment.....	50
Preparation of cells.....	51
Step by step protocol.....	51
Equipment used.....	53
Solutions used.....	54
Programs and program menu points used for image analysis.....	55

Note: The quality of the figures may not be perfect owed to technical issues. To see the original figures in good quality (and some in color), please visit our website at <http://www.cellbio.dote.hu>
