

P. GERGELY

Department of Medical Chemistry
University Medical School of Debrecen

**INTRODUCTION TO
BIOINORGANIC CHEMISTRY
FOR MEDICAL STUDENTS**

University Medical School of Debrecen
1997

CONTENTS

CHAPTER 1	
COORDINATION COMPOUNDS	1
Ligands	3
Nomenclature of complexes	5
Isomerism	6
Ionization isomerism	6
Coordination isomerism	6
Linkage isomerism	6
Geometric isomerism	7
Optical isomerism	7
Properties of complexes	8
Bonding in coordination compounds	9
Valence bond theory	10
Crystal field theory	12
Coordination compounds and living organism	15
CHAPTER 2	
THE EVOLUTION OF INORGANIC AND ORGANIC CHEMICALS ON EARTH: THE ORIGIN OF LIFE	17
Chemical evolution	18
The origin of asymmetric biomolecules	20
The origin of life: availability of inorganic elements in organisms	20
Biological functions of inorganic elements	25
Biological ligands for metal ions	26
Coordination by proteins	26
Tetrapyrrole ligands and other macrocycles	28
Nucleobases, nucleotides and nucleic acids (RNA, DNA) as ligands	29
CHAPTER 3	
FUNCTION AND TRANSPORT OF ALKALI AND ALKALINE EARTH METAL CATIONS	31
Complexes of alkali and alkaline earth metal ions with macrocycles	32
Ion channels	35
Ion pumps	35
Magnesium: catalysis and regulation of bioenergetic processes	37
The physiological role of calcium	40
Calcium is a second messenger in many signal transduction processes	41
Lithium as a mood-stabilizing drug	41

CHAPTER 4

IRON: A VERSATILE TRANSITION METAL WITH DIFFERENT BIOLOGICAL FUNCTIONS	43
Uptake, transport and storage of iron	43
Transferrin	45
Ferritin	45
Oxygen transport and storage through hemoglobin and myoglobin	47
Alternative oxygen transport in lower animals	53
Iron-protein complexes with catalytic function	54
Iron-sulfur and other nonheme iron proteins	58

CHAPTER 5

ZINC- AND COPPER-CONTAINING PROTEINS	59
Carboanhydrase	60
Carboxypeptidase A	62
Alcohol dehydrogenase	63
Other zinc-containing enzymes	64
The "zinc finger" and other gene regulatory zinc proteins	65
Insulin, growth hormone and metallothionein as Zn-containing proteins	66
Biological significance of copper	66
Copper centers in proteins	68
Type 1: blue-copper proteins	69
Type 2 and type 3 copper centers in O ₂ -activating proteins: oxygen transport and oxygenation	71
Cytochrome <i>c</i> oxidase	72
Cu and Zn-containing superoxide dismutases	73

CHAPTER 6

BIOLOGICAL FUNCTIONS OF THE OTHER TRANSITION METALS: MANGANESE, MOLYBDENUM, NICKEL, VANADIUM AND CHROMIUM	75
Manganese-catalyzed oxidation of water to O ₂	76
Oxygen transfer through tungsten- or molybdenum-containing enzymes	78
The biological nitrogen cycle	80
Molybdenum-dependent nitrogen fixation	81
Nickel-containing bacterial and plant enzymes	83
Vanadium-containing hemovanadins	83
Chromium(III) in the glucose tolerance factor	84

CHAPTER 7

THE BIOINORGANIC CHEMISTRY OF THE TOXIC METALS	85
Lead	85
Cadmium	86
Thallium	87
Mercury	87
Aluminum	88
Chromium as chromate(VI)	89

<i>CHAPTER 8</i>	
PLATINUM COMPLEXES IN CANCER THERAPY	91
Cisplatin: mode of action	92
Cytotoxic compounds of other metals	94
<i>CHAPTER 9</i>	
NATURAL SILICATES AND BIOLOGICAL IMPLICATIONS OF SILICON	97
Natural silicates	97
Silica and oesophageal cancer	99
Effects of silica on lung collagen	100
Synthetic silicate glass and ceramics	101
Biocompatibility of silicates for medical use	102
Silicones	104
Biomineralization of silicon	105
<i>CHAPTER 10</i>	
BIOLOGICAL FUNCTIONS OF OTHER NONMETALLIC ELEMENTS	109
Boron	109
Arsenic	109
Selenium	109
Fluorine	111
Chlorine	112
Bromine	113
Iodine	113
<i>APPENDIX</i>	
SUGGESTED READINGS	117
