Contents

Laboratory investigation of water and electrolyte metabolism 3
(E. Szabó, J. Kappelmayer, R. Adány)
Determination of sodium and potassium 3
Measurement of calcium 16
Determination of haemoglobin and haematocrit 20

Laboratory evaluation of renal function 26
(A. Tóth, O. Veress)
Determination of urea 26
Determination of creatinine 28
Endogen creatinine clearance 31
Urinary examination in renal disorders 32

Laboratory tests of carbohydrate metabolism 34
(J. Kappelmayer , O. Veress)
Blood glucose determination 34
Measurement of glycosylated hemoglobin 37
Fructosamine determination 38
Examination of urine 38

Laboratory tests of lipid metabolism 41
(J. Kappelmayer, J. Hársfalvi)
Triglyceride determination 41
Cholesterol determination 44
Measurement of lipoproteins 45
Classification of hyperlipoproteinaemias 47

Clinical enzymology 50
(J. Polgár, L. Fésüs)
Enzyme assays in the diagnosis of acute pancreatitis 50
Laboratory diagnosis of acute myocardial infarction 54
Determination of CK activity 54
Determination of CK-MB 57
Measurement of GOT activity 58
Determination of LD and isoenzymes of LD 60

Laboratory diagnosis of hepatobiliary disorders 62
(A. Tóth, J. Polgár)
Bilirubin metabolism and excretion 62
Determination of urobilinogen in urine 65
Enzyme tests (GPT, GOT, LD, ALP, GGT) 66

Laboratory diagnostics of haemostasis 71
(A.R. Horváth, L. Muszbek)
Indications of haemostasis lab tests 71
Blood coagulation tests 74
Determination of prothrombin time 75
Determination of activated partial thromboplastin time 77
Determination of thrombin time 79
Bleeding time 81
Determination of fibrin monomers 81
Determination of FDP 82

Basic laboratory tests in gynecology 85
(A. Balogh)
hCG determination 85
Pregnancy tests 86
