

UNIVERSITY MEDICAL SCHOOL, DEBRECEN

PHYSIOLOGICAL PRACTICE

A LABORATORY GUIDE

1988

# CONTENTS

1	GENERAL INSTRUCTIONS.....	1
1.1	Experimental conditions.....	1
1.2	Dissection of the frog.....	3
1.3	Description of methods and equipments generally applied.....	4
1.3.1	MINISTIM electrostimulator.....	4
1.3.2	Oscilloscope.....	7
1.3.3	Recording of mechanical response.....	10
1.3.4	Theoretical background of spectrophotometry.....	11
2	MEMBRANE TRANSPORT	
	Examination of ionic transport across the frog skin.....	15
2.1	Measurement of potential gradient in normal Ringer's solution.....	17
2.2	Studying the effect of low Na ion concentration on the potential difference.....	17
2.3	Study of the effect of ouabain treatment on the potential difference.....	18
3	FUNCTION OF NERVE AND MUSCLE.....	19
3.1	Study of the function of peripheral nerves.....	19
3.1.1	Recording of the action potential.....	22
3.1.2	Strength-duration curve.....	23
3.1.3	Separation of fibres with different speeds of conduction.....	23
3.1.4	Study of the function of Na channels.....	24
3.2	Study of the function of skeletal muscles.....	25
3.2.1	Recording of mechanical response evoked by direct stimulation.....	29
3.2.2	Effect of tetracaine on excitability.....	29

3.2.3	Effect of curare on excitability using direct stimulation.....	30
3.2.4	Study of the twitch-potentiating effect of caffeine.....	30
3.2.5	Study of K-contraction.....	32
3.2.6	Study of K-accomodation.....	33
3.2.7	Caffeine contraction.....	33
3.2.8	Experiments with rectus abdominis muscle.....	34
3.3	Experiments on the neuromuscular preparation of the frog.....	35
3.3.1	Recording of single twitches.....	38
3.3.2	Effect of electrotonic membrane potential changes on excitability.....	39
3.3.3	Demonstration of contraction-summation.....	41
3.3.4	Effect of loading on the contractile force.....	42
3.3.5	Investigation of fatigue.....	42
3.3.6	Properties of neuromuscular transmission.....	43
3.4	Experiments with mammalian neuromuscular preparation (Sherrington).....	44
3.4.1	Correlation between the contractile force and the amplitude of stimuli.....	45
3.4.2	Demonstration of the positive staircase phenomenon.....	46
3.4.3	Complete and incomplete tetanus.....	46
3.4.4	Posttetanic potentiation (PTP).....	47
3.4.5	Study of fatigue, Orbeli phenomenon.....	47
3.4.6	Investigation of neuromuscular transmission.....	48
3.5	Study of the function of smooth muscles.....	50
3.5.1	Recording of spontaneous mechanical activity.....	51
3.5.2	Study of the effect of vegetative neurotransmitters.....	52
3.5.3	Study of the effect of histamine.....	53
4	BLOOD.....	55
4.1	Red- and white blood cell count.....	56
4.1.1	Red blood cell count.....	62
4.1.2	White blood cell count.....	64
4.2	Determination of hemoglobin concentration.....	65
4.2.1	Measurement with hemofotometer.....	65
4.2.2	Measurement with spectrophotometer.....	68
4.2.3	Calculation of the hemoglobin content of erythrocytes and the colour index.....	69
4.3	Determination of blood groups (blood typing).....	72

4.3.1	ABO typing.....	74
4.3.2	Rh typing.....	77
4.4	Determination of red blood cell sedimentation rate (Wetgreen's method).....	79
4.5	Determination of the osmotic fragility (resistance) of red blood cells.....	82
4.6	Determination of the viscosity of blood using a modified Ostwald's viscosimeter.....	84
4.7	Determination of bleeding and clotting time.....	86
4.7.1	Determination of bleeding time.....	87
4.7.2	Determination of clotting time.....	88
4.8	The role of calcium ions and thrombin in blood coagulation...	89
4.9	Differential blood count.....	92
5	HEART, CIRCULATION AND RESPIRATION.....	95
5.1	Examination of in situ frog heart.....	95
5.1.1	Examination of Goltz's reflex.....	96
5.1.2	Recording of normal heart contractions.....	97
5.1.3	Premature contractions (extrasystole).....	99
5.1.4	Effects of thermal stimuli.....	100
5.1.5	Examination of Stannius's ligatures.....	102
5.1.6	Demonstration of Bowditch's all or nothing law.....	102
5.1.7	Summation of stimuli.....	103
5.1.8	Effects of vagal stimulation.....	104
5.1.9	Recording of electrical activity from isolated frog heart.....	106
5.2	Examination of isolated frog heart.....	107
5.2.1	Normal contractions.....	108
5.2.2	Effects of extracellular ions.....	109
5.2.3	Effects of vegetative transmitters.....	110
5.3	Examination of circulation in animal experiments.....	113
5.3.1	Direct measurement of blood pressure and recording respiration in dog.....	114
5.3.2	Examination of the circulation in frog (Laewen-Trendelenburg type preparation).....	121
5.3.3	Examination of circulation in the frog's tongue.....	123
5.4	Cardiorespiratory experiments with human beings.....	124

5.4.1	Electrocardiography (ECG).....	125
5.4.2	Measurement of blood pressure.....	129
5.4.3	Examination of arterial pulse.....	130
5.4.4	Examination of heart sounds.....	132
5.4.5	Determination of pulmonary volumes and capacities.....	133
5.4.6	Determination of respiratory pressure.....	135
6	EXCRETION.....	137
6.1	Examination of normal urine.....	137
6.1.1	Determination of the pH of urine.....	137
6.1.2	The specific gravity of normal urine.....	137
6.1.3	Detection of uric acid.....	138
6.1.4	Detection of creatinine.....	139
6.1.4.1	Weyl's test.....	139
6.1.4.2	Jaffe's test.....	140
6.2	Examination of pathologic urine.....	140
6.2.1	Detection of proteins in urine.....	141
6.2.2.1	Fehling's test.....	142
6.2.2.2	Nylander's test.....	142
6.2.3	Detection of blood in urine.....	142
6.2.4	Detection of pus in urine.....	143
6.2.5	Detection of urobilinogen in urine.....	144
6.2.6	Detection of bilirubin in urine.....	144
6.2.6.1	Gmelin's test.....	145
6.2.6.2	Rosenbach's test.....	145
6.2.6.3	Rosin's test.....	145
6.2.7	Detection of acetone in urine.....	146
6.2.7.1	Legal's test.....	146
6.2.7.2	Lieben's test.....	147
6.2.8	Examination of urinary sediments.....	147
6.2.9	Urinalysis with reagent strips to detect pathological constituents in urine.....	148
7	EXAMINATION OF GASTRIC JUICES.....	149
7.1	Examination of amylase- and maltase enzyme activity in the saliva.....	149
7.2	Detection of hydrochloric acid in the gastric juices .....	150
7.3	Quantitative determination of acidity in gastric content using Töpfer's method.....	151

7.4	Detection of lactic acid in gastric content by Uffelmann's method.....	152
7.5	Detection of bile acid by Pettenkoffer's method.....	152
7.6	Detection of bilirubin in gastric juice.....	153
7.6.1	Gmelin's reaction.....	153
7.6.2	Rosenbach's reaction.....	153
7.6.3	Rosin's reaction.....	154
7.7	Detection of blood in gastric content.....	154
8	ENERGY METABOLISM.....	155
8.1	Determination of metabolism in small animals.....	155
8.2	Determination of basal metabolic rate in humans.....	158
8.3	Use of the bicycle ergometer for measuring mechanical work	160
9	HORMONES.....	163
9.1	Tests for pregnancy hormones.....	163
9.1.1	Galli-Mainini's test.....	163
9.1.2	Immunological test (Menotest) for pregnancy.....	164
9.2	Examination of carbohydrate metabolism.....	168
9.2.1	Determination of glucose level in blood with o-toluidine.....	168
9.2.1.1	Procedure for the precipitation of proteins.....	168
9.2.1.2	Procedure for the colour reaction.....	169
9.2.1.3	Calculation of glucose concentration.....	169
9.2.2	Examination of the changes in blood glucose level on treatment with adrenaline, cortisone and insuline.....	170
9.3	Effect of cortisone treatment on eosinophilic cell count ..	171
10	EXAMINATIONS OF THE NERVOUS SYSTEM AND THE SENSE ORGANS.....	173
10.1	Examination of the cranial nerves.....	175

10.1.1	The 1st cranial nerve.....	175
10.1.2	The 2nd cranial nerve.....	176
10.1.2.1	Examination of visual acuity.....	177
10.1.2.2	Examination of the visual field.....	178
10.1.2.2.1	Confrontal examination of the visual field ...	178
10.1.2.2.2	Examination of the visual field with perimeter	180
10.1.2.3	Ophthalmoscopy.....	181
10.1.3	The 3rd, 4th and 6th cranial nerves.....	184
10.1.3.1	Examination of the internal ocular muscles.....	184
10.1.3.2	Examination of the external ocular muscles.....	185
10.1.4	The 5th cranial nerve.....	187
10.1.4.1	Examination of the exit points.....	188
10.1.4.2	Cornea reflex.....	188
10.1.4.3	Motor function.....	188
10.1.4.4	Sensory function.....	189
10.1.5	The 7th cranial nerve.....	190
10.1.5.1	Motor function.....	191
10.1.5.2	Sensory function.....	191
10.1.6	The 8th cranial nerve.....	192
10.1.6.1	Hearing test with whispered speech.....	193
10.1.6.2	Audiometry.....	193
10.1.6.3	Tuning fork tests.....	193
10.1.6.3.1	Schwabach's test.....	193
10.1.6.3.2	Rinne's test.....	194
10.1.6.3.3	Weber's test.....	194
10.1.7	The 9th cranial nerve.....	195
10.1.7.1	Examination of taste sensation.....	196
10.1.7.2	Sensory function of the upper part of the pharynx	196
10.1.7.3	Examination of motor function.....	196
10.1.8	The 10th cranial nerve.....	197
10.1.9	The 11th cranial nerve.....	198
10.1.10	The 12th cranial nerve.....	198
10.2	Examination of the locomotor system.....	199
10.2.1	Examination of trophism and tonicity.....	199

10.2.2	Muscular strength.....	199
10.3.	The sensory system.....	200
10.4.	Reflex action.....	201
10.4.1	Stretch reflexes (tendon reflexes).....	202
10.4.2	Superficial reflexes.....	203
10.4.3	Pyramidal signs.....	204
10.4.3.1	Pyramidal signs of the upper limbs.....	204
10.4.3.2	Pyramidal signs of the lower limbs.....	205
10.4.3.3	Patellar- and Achilles clonus.....	205
10.4.4	Liberation signs.....	206
10.4.4.1	Mesial line reflexes.....	206
10.4.4.2	Complex of sucking-grasping reflexes.....	207
10.4.4.3	Palmomental reflex.....	207
10.5	Coordination.....	208
10.5.1	Task-oriented experiments.....	208
10.5.2	Bárány experiments.....	209
10.5.3	Diadochokinesis.....	209
10.5.4	Blackslamming sign.....	210
10.5.5	Romberg positions.....	210
10.5.6	Walking, walking with eyes closed.....	211
11	STUDIES WITH COMPOUND DIAGNOSTIC DEVICES.....	213
11.1	Examinations with the KTD 8 type CDE.....	214
11.1.1	Measurement of pulse rate, blood pressure and body temperature.....	214
11.1.2	Spirometry.....	216
11.2	Examinations with the KTD 11 F type CDE.....	217
11.2.1	Examination of peripheric pulse waves.....	217
11.2.2	ECG and EEG examinations.....	218
11.2.3	Determination of reaction time.....	220
11.2.4	Audiometry.....	220
11.2.5	Autogenous training by biofeedback.....	221
	Contents.....	223
