

CRC Handbook of Fast Neutron Generators

Volume I

Author

Julius Csikai, Ph.D.

Professor of Physics
Kossuth University
Debrecen, Hungary

CRC Press, Inc.
Boca Raton, Florida

TABLE OF CONTENTS

Volume I

Introduction	1
Chapter 1	
Principles of Operation and Output Characteristics of Neutron Generators	3
I. The D(d,n) and T(d,n) Reactions	3
A. Neutron Source Reactions	3
B. Angular Distribution of D-D and D-T Source Yields	5
C. Energy and Energy Spread of Neutrons in D-D and D-T Reactions	13
D. A Comparison of Measured and Calculated Neutron Energies	29
E. The Polarization of Neutrons from the D-D and D-T Reactions	35
II. Generation and Acceleration of Ions	44
A. High Voltage Power Supply	44
B. Ion Sources	45
1. Ion Sources with Continuous Operating Modes	45
2. Pulsed Ion Beams	53
3. Polarized Ion Sources	55
4. Charge, Mass, and Energy Spread of Extracted Ions	58
C. Beam Accelerating and Transport Systems	64
D. Dimensions and Energy Measurements of the Beam	67
III. Targets and Neutron Yields	72
A. Stationary Targets	72
B. Rotating Targets	80
C. Special Neutron Sources	81
IV. Vacuum Systems	93
V. Tritium Scrubbing Systems	96
VI. Design and Operational Characteristics of Some D-T Generators	96
VII. Neutron Flux and Yield Measurements	99
VIII. Design of a Neutron Generator Laboratory	113
References	120
Chapter 2	
Miscellaneous Applications of Neutron Generators	133
I. Introduction	133
II. Activation Analysis with 14-MeV Neutrons	133
A. Metallurgy	147
B. Chemistry	150
C. Biology	151
D. Meteoritic and Lunar Studies	157
E. Geology and Mining	159
F. On-Line Activation Analysis	165
G. Prompt Radiation Analysis	168
H. Pulsed Neutron Experiments in Neutron and Reactor Physics	176
I. Application of Pulsed Neutron Generators in Well-Logging and Bulk-Media Assay	180
J. Use of Small Neutron Generators in Nuclear Safeguards Research	191
K. Fast Neutron Irradiation Effects in Solids	197
L. Use of Neutron Generators for Neutron Radiography	210

M.	Application to Radiobiology and Radiotherapy	215
References	219
Index	235

Volume II

Fundamental Nuclear Research and Neutron Data Measurement	1
I.	Introduction	1
II.	Nucleon-Nucleon Interaction	1
III.	Experimental Techniques for Total, Elastic, and Nonelastic Cross-Section Measurements	8
IV.	Irradiation and Measuring Methods Used for the Determination of Partial Nonelastic Cross-Sections	11
A.	Preparation of Samples	14
B.	Sources of D-T and D-D Neutrons	15
C.	Determination of Neutron Flux	15
D.	Determination of Activity	15
E.	Sources of Errors	15
V.	Present Status of Fast Neutron Cross-Section Data	16
A.	Total Neutron Cross-Section	17
B.	Elastic Scattering Cross-Sections	23
1.	The ^1H (n,n) ^1H Cross-Section	24
2.	Status of Elastic-Scattering Cross-Sections	27
3.	Polarization of Fast Neutrons Due to Elastic Scattering	33
C.	Nonelastic Cross-Sections and Nuclear Radii	35
D.	Partial Nonelastic Cross-Sections	39
1.	Neutron Inelastic Scattering and the (n,2n) Reaction	39
a.	Energy Spectra, Angular Distributions, and Excitation Functions of (n,n'), and (n,2n) Reactions	39
b.	Cross-Sections of (n,n') and (n,2n) Reactions Around 14 MeV	75
c.	Systematics in the (n,2n) Cross-Sections	88
2.	Neutron-Induced Charged-Particle Reactions	93
a.	The Reactions (n,p) and (n, α)	94
b.	The (n,xch) Low-Yield Reactions	125
3.	Radiative Capture of Fast Neutrons	141
4.	Gamma Ray Production in the (n,x γ) Reaction	151
5.	Fission by Fast Neutrons	157
6.	Neutron Multiplication and Leakage Spectra	175
7.	Study of Reaction Product Decay Data	180
8.	Summary of Fast Neutron Data Requirements	182
9.	Lists of Data Collections and Computer Codes	183
References	187
Index	217
