

# **Reperfusion-induced Arrhythmias: Control and Mechanisms**

**Árpád Tószaki**

Akadémiai Kiadó - Scientia Publishing  
Budapest

# Contents

Preface.....	1
Ventricular fibrillation: a brief history.....	3
Reentry .....	7
Duration of the preceding period of ischemia .....	12
Free radicals .....	16
Calcium .....	20
Potassium .....	25
Sodium .....	29
Magnesium.....	32
Protons.....	35
ATP-sensitive potassium channels .....	37
Heart rate.....	41
Platelet activating factor (PAF) .....	44
Prostaglandins .....	46
Thromboxane .....	49
Catecholamines .....	51
Histamine .....	54
Amphiphiles .....	57
Endothelin .....	59

Preconditioning .....61  
Nitric oxide.....68  
Clinical relevance of reperfusion arrhythmias.....71  
Future research direction: towards molecular biology .....74  
Summary .....76  
References .....79
