

INSTRUMENTAL EXAMINATION OF THE MOTOR SYSTEM

Edited
by

SZ. TÓTH

National Institute
of Neurosurgery, Budapest

AKADÉMIAI KIADÓ, BUDAPEST 1986

CONTENTS

Preface	7
Chapter 1 Evolution of knowledge on the motorium. Development of electromyography and other instrumental investigations (Szabolcs Tóth)	9
Chapter 2 Anatomy, physiology and organization of the central motor system (Szabolcs Tóth)	18
Chapter 3 Anatomy, physiology and organization of the peripheral motorium: the skeletal muscles, the peripheral motor and sensory nerves (Ferenc Mechler)	49
Chapter 4 The laboratory for the investigation of the motor system (Tibor Nagypál)	57
Chapter 5 Measurement of electrical changes (Tibor Nagypál)	71
Chapter 6 Electrical activity recorded intra- and extracellularly in the muscle (Ferenc Mechler)	78
Chapter 7 Diseases of the central motor system: examination of the functions of the pyramidal and extrapyramidal systems (Szabolcs Tóth)	93
Chapter 8 Diseases of the peripheral motor neuron. Anterior horn and degenerative diseases (Ferenc Mechler)	112
Chapter 9 Injury and regeneration of the peripheral nerve (Szabolcs Tóth)	119
Chapter 10 Electromyographic signs of myopathies (György Bekény)	127
Chapter 11 Metabolic myopathies. The EMG in the myotonies (György Bekény)	135
Chapter 12 Collagen diseases (Collagenoses) (Ferenc Mechler)	162

Chapter 13	
The measurement of abnormal motor function in man. Analysis of rigidity and tremor (Blaine S. Nashold, Jr.)	175
Chapter 14	
Electrophysiology of the extraocular muscles (Peter Marek)	190
Chapter 15	
Electromyography of the diseases of the extraocular muscles (László Remenár)	197
Chapter 16	
Mathematical analysis of the electric activity of the nerve and the muscle (Tibor Nagypál)	212
References	230
Index	272
