## Section I Current concepts of the Blood–Brain Barrier

|  |    |
|--|----|
| 1. Angiogenesis and differentiation of blood–brain barrier endothelium<br><i>W. Risau and H. Seulberger</i>  | 3  |
| 2. Blood–brain barrier and the cerebral endothelium<br><i>Z. Nagy</i>  | 11 |
| 3. Astrocytes and the blood–brain barrier. Kinetics of astrocyte activation after injury and induction effects on endothelium<br><i>P.A. Cancilla, J.A. Berliner and J.V. Bready</i>   | 31 |
| 4. Enzymatic barrier mechanisms for neurotransmitter monoamines and their precursors at the blood–brain interface<br><i>J.E. Hardebo and C. Owman</i>                                  | 41 |
| 5. Enzymatic characterization of cultured endothelial cells from porcine cerebral capillaries<br><i>J. Meyer, U. Mischek, M. Veyhl and H.J. Galla</i>                                  | 57 |
| 6. Receptor-mediated transport of peptides through the blood–brain barrier<br><i>W.M. Pardridge</i>  | 61 |
| 7. On the glucose transporter of the blood–brain barrier and its regulation by physiological and pathological conditions<br><i>S.I. Harik and R.N. Kaloria</i>                         | 71 |
| 8. Estimation of D-glucose permeabilities and distribution space in the human brain in short-time experiments<br><i>G.M. Knudsen, K. Pettigrew, O. Paulson, M. Hertz and C. Patlak</i> | 83 |

## Section II Pathophysiology of Barrier Mechanisms

|  |    |
|--|----|
| 9. Pathophysiological aspects of plasma protein formation in the choroid plexus<br><i>G. Schreiber and A.R. Aldred</i> | 89 |
|--|----|

10. Protein synthesis and secretion by the choroid plexus  
*C. Nilsson, A. Aldred, A. Jaworowski, M. Lindvall-Axelsson, C. Owman and G. Schreiber* 105
11. Inter-endothelial gap formation in osmotic and traumatic disruption of blood–brain barrier  
*P.A. Fraser* 109
12. Experimental opening of the blood–brain barrier affects cerebral blood flow and alters flow response to circulating transmitter amines and peptides  
*C. Owman and J.E. Hardebo* 113
13. Extravasation of plasma proteins and structural changes in the rat brain after intracarotid infusions of hypertonic solutions  
*T.S. Salahuddin, B.B. Johansson, H. Kalimo and Y. Olsson* 131
14. Possible consequences of blood–brain barrier opening for neuroendocrine function  
*D. Ježová* 135
15. Neuronal injury after a transient opening of the blood–brain barrier: modifying factors  
*B.B. Johansson, C. Nordborg and I. Westergren* 145
16. Blood–brain barrier and neuronal damage in acute experimental hypertension and epileptic seizures  
*T.-E. O. Sokrab, H. Kalimo and B.B. Johansson* 159

### Section III Therapeutic Role of Barrier Modifications

17. A therapeutic role for osmotic opening of the blood–brain barrier. Re-evaluation of literature and of importance of source–sink relations between brain and tumor  
*S.I. Rapoport and P.J. Robinson* 167
18. Dexamethasone pretreatment in osmotic blood–brain barrier disruption  
*M.K. Gumerlock and H.A. Pool* 183
19. Chemotherapy and monoclonal antibody delivery to malignant brain tumors: the role of blood–brain barrier modification  
*E.A. Neuwelt, P.A. Barnett and S.A. Dahlborg* 187
20. A review of hyperosmotic blood–brain barrier disruption in seven experimental brain tumor models  
*R.G. Blasberg, D. Groothuis and P. Molnar* 197
21. Chimeric peptides as a vehicle for neuropharmaceutical delivery through the blood–brain barrier  
*W.M. Pardridge* 221
22. Liposome entrapment of drugs and enzymes to enable passage across the blood–brain barrier  
*R.A. Fishman and P.H. Chan* 231

#### Section IV Blood–Brain Barrier in Neurotoxicology

23. The blood–brain barrier in neurotoxicology: an overview  
*J.E. Cremer* 243
24. The role of the blood–brain barrier in preventing MPTP neurotoxicity  
*S.I. Harik, N.J. Riachi, R.N. Kalaria and J.C. LaManna* 255
25. Experimental bilirubin encephalopathy: role of the blood–brain barrier  
*R.P. Wennberg* 269
26. Lead and the blood–brain barrier  
*R. Deane and M.W.B. Bradbury* 279
27. Change in the blood–brain barrier during chronic amphetamine intoxication in the guinea-pig  
*B.V. Zlokovic, M.B. Segal, S. Hyman and J.G. McComb* 291

#### Section V The Blood–Brain Barrier in the Pathophysiology of Cerebrovascular Lesions

28. Blood–brain barrier dysfunction as a pathogenetic factor in chronic hypertensive lesions  
*F. Hazama, E. Yamada and N. Yukioka* 297
29. The role of the blood–brain barrier in ischemic brain lesions  
*G. Nagashima, T.S. Nowak, Jr., F. Joo, J. Ikeda, C. Ruetzler, J. Lohr and I. Klatzo* 311
30. The blood–brain barrier and remote tissue changes in brain infarction  
*C. Nordborg* 323
31. Free radicals, ischemia, xanthine oxidase and the brain capillary  
*A.L. Betz, D. Martz and J. Randall* 333
32. Correlation between UV-induced endothelial damage, platelet aggregation, microcirculatory disturbance and blood–brain barrier breakdown  
*F. Gotoh, Y. Fukuuchi, A. Koto, T. Amano, Y. Naganuma, N. Ito, K. Obara, K. Muramatsu, K. Takahashi, T. Fujiwara and R. Senda* 343
33. Brain edema factors  
*A. Baethmann, L. Schürer, O. Kempfski, F. Staub, J. Peters, A. Unterberg, M. Wahl and K. Maier-Hauff* 357
34. Hemodynamic and metabolic disturbances in experimental peritumoral edema  
*K.-A. Hossmann* 369

#### Section VI Afferent and Efferent Pathways from the Brain to the Immune System

35. Immunologically privileged sites  
*L. Brent* 383

36. Overview of passage routes of interstitial fluid to the lymphatics: history and current concepts  
*M.W.B. Bradbury* 403
37. Drainage of cerebral extracellular fluids into cervical lymph: an afferent limb in brain/immune system interactions  
*H.F. Cserr, C. Harling-Berg, T. Ichimura, P.M. Knopf and S. Yamada* 413
38. Lymphatic drainage of cerebrospinal fluid in the primate  
*J.G. McComb and S. Hyman* 421
39. Passage of lymphocytes across the blood-brain barrier in health and disease  
*H. Wekerle, B. Engelhardt, W. Risau and R. Meyermann* 439
40. Resistance modulation of endothelial cell monolayers by activated T-lymphocytes  
*U. Mischeck, H.M. Hein, M. Weske, M. Baethmann, Y. Qin, R. Meyermann and H.-J. Galla* 447
41. Lymphocyte homing to the central nervous system  
*L. Steinman* 453

## Section VII Antigen Presentation in the Central Nervous System

42. Class II major histocompatibility complex antigen expression in central nervous system: microglia, astrocytes and endothelial cells  
*R.M. McCarron, M. Tanaka and M. Spatz* 467
43. Modulation of Ia expression on murine cerebral vascular endothelial cells  
*M. Spatz, N. Merkel, L. Wang, J. Bembry and R.M. McCarron* 485
44. Possible role of the choroid plexus in immunological communication between the brain and periphery  
*J.A. Nathanson and L.L.Y. Chun* 501

## Section VIII Immunocytotherapy in the Brain

45. Clearance of experimental tumor grafts in the central nervous system. Role of the major histocompatibility complex class I gene products  
*H.-G. Ljunggren, T. Yamasaki, V.P. Collins and K. Kärre* 511
46. Intracerebral immunity to lymphoma transplants: effect of a novel major histocompatibility complex class I gene in the host or in the graft  
*H.-G. Ljunggren, P. Höglund and K. Kärre* 523
47. Interleukin-2 and cytotoxic lymphocyte therapy of primary and metastatic brain tumors  
*E.A. Grimm, R.P. Moser, J.B. Blacklock, W. Loudon and J. Carinhas* 527

## Section IX Transplantation in the Central Nervous System

48. Neuronal and non-neuronal grafts to brain: effects on the blood-brain barrier  
*S.-i. Tsubaki, S. Wakai and M.W. Brightman* 541
49. Demonstration of a persistent defect in the blood-brain barrier after  
 ventral root implantation into the spinal cord using immunogold technique  
 and staphylococcal  $\alpha$ -toxin  
*M. Risling, A.M. Sjögren, H. Lindå, S. Cullheim, T. Carlstedt and  
 M. Thelestam* 555
50. Origins of blood vessels in allogeneic neural grafts  
*R.D. Broadwell* 561
51. A role for CD8+ T lymphocytes late in the rejection of intraventricular  
 fetal neocortical fragment allografts in the mouse  
*M.K. Nicholas and B.G.W. Arnason* 573
52. Immune reactions against mouse brain xenografts in normal and  
 cyclosporin A-treated rats  
*B.R. Finsen, E.B. Pedersen, E. Bakkum, M. Hokland and J. Zimmer* 587
53. Clinical trials with allogeneic fetal neural grafts in Parkinson's disease:  
 theoretical and practical immunological aspects  
*H. Widner, P. Brundin and O. Lindvall* 593
