CONTENTS IN BRIEF

1 INTRODUCTION	1
2 STEREOCHEMISTRY	13
3 HYDROCARBONS	33
4 AROMATIC COMPOUNDS	81
5 ORGANIC HALOGEN COMPOUNDS	107
6 ALCOHOLS AND PHENOLS	115
7 ETHERS	133
8 SULFUR CONTAINING ORGANIC COMPOUNDS	139
9 ALDEHYDES AND KETONES	143
10 NITROGEN-CONTAINING ORGANIC COMPOUNDS	163
11 CARBOXYLIC ACIDS	195
12 CARBOXYLIC ACID DERIVATIVES	229
13 AMINO ACIDS	243
14 PEPTIDES AND PROTEINS	263
15 CARBOHYDRATES	295
16 LIPIDS	335
17 NUCLEOTIDES AND NUCLEIC ACIDS	361
INDEX	389

CONTENTS

CHAPTER 1

INTRODUCTION

Organic chemistry. The study of carbon compounds	1
Carbon-carbon bonds	2
Allotropic forms of carbon	2
Carbon-heteroatom bonds	5
Classification of organic compounds	5
Electron distributions in organic compounds	8
Chemical reactions in organic chemistry	10

CHAPTER 2

STEREOCHEMISTRY

Chiral molecules	13
Three-dimensional structures of enantiomers	14
Properties of enantiomers	16
Optical activity	17
Relative and absolute configurations	18
The D and L system: relative configuration	20
The R-S system of absolute configuration	21
Molecules with more than one stereocenters	22
Chiral molecules without asymmetric atoms	25
Stereochemistry of chemical reactions that produce chiral centers	26
The origin of asymmetric biomolecules	28
Separation of enantiomers: resolution	29
	30

CHAPTER 3

HYDROCARBONS

Saturated hydrocarbons: alkanes (paraffins)	33
Conformations of alkanes	33
Constitutional (structural) isomerism of alkanes	34
IUPAC nomenclature of alkanes	37
Nomenclature of alkyl groups	39
Physical properties of alkanes	42
Petroleum and petroleum refining	43
Cycloalkanes	44
Conformations of cyclohexane	46
Substituted cyclohexanes: axial and equatorial hydrogen atoms	47
Distributed cyclohexanes: cis-trans isomerism	49
Bicyclic alkanes	51
	52

Chemical reactions of saturated hydrocarbons	53
Combustion of alkanes	53
Halogenation of alkanes	54
Chlorination of methane	55
Unsaturated hydrocarbons: alkenes and alkynes	56
Nomenclature and structure of alkenes	56
Cis-trans isomerism of alkenes	58
1,3-butadiene: electron delocalization	59
The stability and light absorption of conjugated polyenes	61
Addition reactions of alkenes	62
Activation of the π bond	62
Addition of hydrogen halides to alkenes	63
Acid-catalyzed hydration of alkenes	64
Addition of halogens to alkenes	64
Catalytic hydrogenation of alkenes	65
Polymerization of alkenes	66
Isoprenes: natural compounds with isoprene units	68
Terpenes	69
Some important terpenes	71
Carotenes	73
Vitamin A and the photochemistry of vision	74
Alkynes	77
Structure and bonding in acetylene	77
Addition reactions of alkynes	78

CHAPTER 4

AROMATIC COMPOUNDS

Structure and bonding of benzene	81
The Kekulé structure for benzene	82
Structure of benzene	83
Resonance theory for the stability of benzene	85
Aromaticity and Hückel's rule	86
Nomenclature of aromatic compounds	88
Properties of aromatic hydrocarbons	90
Benzene and its derivatives	90
Polycyclic aromatic hydrocarbons	91
Heterocyclic aromatic compounds	93
Aromaticity of five-membered heterocycles	94
Aromaticity of six-membered heterocycles	96
Chemical reactions of aromatic compounds	98
Mechanism of electrophilic aromatic substitution	99
Electrophilic substitution reaction of benzene with bromine	99
Effect of substituents: reactivity and orientation	102
Reactivity of polycyclic and heterocyclic aromatic compounds	105
Oxidation	106

CHAPTER 5	
ORGANIC HALOGEN COMPOUNDS	107
Chemical reactions of halogen compounds	107
Nucleophilic substitution	108
Elimination reactions	110
Important halogenated compounds	110
 CHAPTER 6	
ALCOHOLS AND PHENOLS	115
Classification of alcohols and phenols	115
Physical properties of alcohols and phenols	118
Synthesis of alcohols and phenols	120
Chemical properties of alcohols and phenols	122
The acidity of alcohols and phenols	122
Preparation of ethers	124
Dehydration of alcohols	124
Formation of esters	125
Oxidation of alcohols and phenols	125
Biological oxidation of alcohols	126
Oxidation of phenols	126
Important alcohols and phenols	127
Derivatives of alcohols and phenols	130
 CHAPTER 7	
ETHERS	133
Preparation of ethers	134
Properties of ethers	135
Important ethers	135
 CHAPTER 8	
SULFUR CONTAINING ORGANIC COMPOUNDS	139
Thiols (mercaptans)	140
Thioethers	141
 CHAPTER 9	
ALDEHYDES AND KETONES	143
Nomenclature of aldehydes and ketones	143
Structure and bonding of the carbonyl group	144
Physical properties of aldehydes and ketones	145
Synthesis of aldehydes and ketones	146
Reactions of aldehydes and ketones	147
Nucleophilic addition reactions	147
Hydrates	147
Hemiacetals and hemiketals	148
Acetals	148
Addition of hydrogen cyanide	149
Addition of ammonia	149

Condensation reactions	149
Oxidation and reduction reactions	150
Keto and enol tautomers	151
Enol compounds in cellular processes	153
Aldol addition and aldol condensation	154
Aldol condensations in the biological processes	155
Important aldehydes and ketones	156
Quinones	159
Natural quinones as reversible oxidizing agents	160

CHAPTER 10

NITROGEN-CONTAINING ORGANIC COMPOUNDS	163
Amines	163
Physical properties of amines	165
Preparation of amines	166
Chemical properties of amines	167
Amines as bases	168
Ammonium salts	170
Quaternary ammonium salts	170
Reactions of amines	171
Schiff's base formation	171
Acylation reaction	171
Reactions of amines with nitrous acid	171
Biologically important amines	173
Amines as neurotransmitters	175
Pyrimidine and purine bases	177
Biologically important derivatives of heterocyclic compounds containing nitrogen atom	178
Five-membered heterocycles	179
Six-membered heterocycles	181
Polycyclic compounds containing nitrogen heteroatom	184
Colored compounds and dyes	186
The sulfa drugs	189
Alkaloids	191

CHAPTER 11

CARBOXYLIC ACIDS	195
Nomenclature of carboxylic acids	195
Physical properties of carboxylic acid	198
Preparation of carboxylic acids	200
Chemical properties of carboxylic acids	201
Acidity of carboxylic acids	201
Salts of carboxylic acids	203
Decarboxylation reactions	204
Oxidation in biological systems	204
Important carboxylic acids	206
Fatty acids	210
Detergents	212
Prostaglandins	215

Hydroxy acids	217
Important hydroxy acids	218
Keto acids	220
Ketone bodies	222
The tricarboxylic acid cycle	225
Reactions of the tricarboxylic acid cycle	226

CHAPTER 12

CARBOXYLIC ACID DERIVATIVES	229
Esters of carboxylic acids	229
Preparation of esters	230
The mechanism of acid-catalyzed esterification	230
Saponification of esters	231
Important esters	232
Thioesters	234
Carboxylic acid anhydrides	235
Acyl halides	236
Amides	237
Derivatives of carbonic acid	238

CHAPTER 13

AMINO ACIDS	243
Structure of amino acids	243
Classification of amino acids found in proteins	244
Nonpolar (hydrophobic) side chains	244
Polar (uncharged) side chains	245
Negatively charged (acidic) side chains	245
Positively charged (basic) side chains	246
Nonstandard amino acids	246
Stereochemistry of amino acids	248
Absorption of light by amino acids	249
Acid-base behavior of amino acids	250
Reactions of amino acids	254
Specific reactions of the amino group	254
Specific reactions of the carboxyl group	258
Separation of amino acids	259
Electrophoresis of amino acid mixtures	260
Ion-exchange chromatography	260
High-performance liquid chromatography	261

CHAPTER 14

PEPTIDES AND PROTEINS	263
Stereochemistry of the peptide bond	264
The amino acid sequence of polypeptide chains:	
Principle of sequence analysis	266
Identification of amino- and carboxyl-terminal residues	266
Cleaving the polypeptide chain	267
The Edman degradation	267

Ordering peptide fragments	268
Chemical synthesis of peptides	269
Naturally occurring peptides	272
Structure and function of proteins	277
Functional roles of proteins	277
Physical and chemical properties of proteins	279
Purification of proteins	280
The three-dimensional structure of proteins	284
The secondary structure of proteins	285
Tertiary structure: the conformation of globular proteins	289
Tertiary structure is determined by amino acid sequence	290
Common structural patterns in the conformation of proteins	291
Protein quaternary structure	293

CHAPTER 15

CARBOHYDRATES	295
Monosaccharides	295
Configurations of monosaccharides: D and L designations	296
Determination of the configurations of monosaccharides	299
The cyclic structures of monosaccharides	299
Furanose structures	300
Pyranose structures	301
Mutarotation	303
Chemical reactions of monosaccharides	303
Reduction of monosaccharides	303
Oxidation of monosaccharides	304
Identification of aldoses and ketoses by oxidizing agents	305
Reactions at the hydroxyl groups	305
Common monosaccharides	306
Derivatives of monosaccharides	308
Glycosides	308
Deoxy and amino sugars	309
Glycolysis: importance of phosphorylated intermediates	312
Disaccharides	315
Nonreducing disaccharides	316
Sucrose	316
Sweeteners in food	318
Reducing disaccharides	319
Oligosaccharides of glycoproteins	321
Polysaccharides	322
Energy-storing homopolysaccharides	322
Starch	322
Glycogen	324
Structural homopolysaccharides	326
Heteropolysaccharides: glycosaminoglycans, and their complexes: proteoglycans	328
The structure of bacterial cell wall	332

CHAPTER 16	
LIPIDS	335
Glycerophospholipids	337
Sphingolipids	342
Steroids	344
Cholesterol	345
The structure of biological membranes	348
The lipid bilayer	348
The fluid mosaic model for membrane structure	351
Steroids with specific biological functions	353
Vitamin D	354
Bile acids	355
Steroid hormones	356
Corticosteroids	357
Sex hormones	358
Steroid glycosides	359
 CHAPTER 17	
NUCLEOTIDES AND NUCLEIC ACIDS	361
Nucleotides	361
Pyridine and purine bases	362
Nucleosides	363
Nucleotides	365
Nucleotide coenzymes	369
Polynucleotides	371
Chemical structure of DNA	372
DNA double helix	375
Denaturation of double-stranded DNA	378
Principle of hybridization	380
Types of DNA structure	380
Determination of DNA sequences	381
Chemical structure of RNA	385
Secondary and tertiary structures of RNA	385
Types of RNA	388
 INDEX	389
