INTRODUCTION	1
CHAPTER 1	
COVALENT BONDING IN ORGANIC COMPOUNDS	2
Molecular orbitals	2
Valence bond theory	5
The carbon-carbon covalent bond	6
Carbon-hydrogen bond: orbital hybridization and the structure of methane	8
Carbon-carbon single bond: the structure of ethane	15
Carbon-carbon double bond: the structure of ethene	16
Carbon-carbon triple bond: the structure of ethyne	20
Classification of organic compounds	22
CHAPTER 2	
SATURATED HYDROCARBONS: ALKANES AND CYCLOALKANES	26
Alkanes	26
Free rotation about the carbon-carbon single bond: conformations and torsional strain	26
Structural isomers of alkanes	28
Nomenclature of alkanes	31
Nomenclature of alkyl groups	32
Nomenclature of branched-chain alkanes	35
Physical properties of alkanes	39
Uses of alkanes	41
Cycloalkanes	43

The structures of cycloalkanes	43
Substituted cyclohexane compounds: axial and equatorial hydrogens	46
Disubstituted cycloalkanes: cis-trans isomerism	48
Synthesis of alkanes and cycloalkanes	53
Reaction of alkanes	55
CHAPTER 3	
UNSATURATED HYDROCARBONS: ALKENES AND ALKYNES	57
Alkenes: structure and properties	57
Isomerism of alkenes	60
Dienes	63
Butadiene: electron delocalization	64
Conformations of 1,3-butadiene	65
Molecular orbitals of 1,3-butadiene	66
The stability of conjugated dienes	68
Reactions of the carbon-carbon double bond	69
Polymerization of alkenes and dienes	71
Isoprene and isoprene rule	72
Conjugated unsaturated systems: visible-ultraviolet spectroscopy	73
The photochemistry of vision	76
Photochemical isomerization of alkenes	80
Alkynes	81
CHAPTER 4	
AROMATIC COMPOUNDS: THE PHENOMENON OF AROMATICITY	83
Reaction of benzene	84
The Kekule structure for benzene	85

Modern theories of the structure of benzene	87
Resonance theory of benzene	87
Molecular orbital theory of benzene	89
Nomenclature of benzene derivatives	92
Heterocyclic aromatic compounds	97
Aromatic compounds in biochemistry	100
Reactions of aromatic compounds with electrophiles	105
The mechanism for electrophoric aromatic substitution	107
The mechanism of halogenation of benzene	109
Effect of substituents: reactivity and orientation	111
Theory of orientation	115
CHAPTER 5	
ORGANIC HALOGEN COMPOUNDS	122
Reactions of alkyl halides: nucleophilic substitution reactions	123
Important halogen compounds	125
CHAPTER 6	
ALCOHOLS AND PHENOLS	128
Structure and nomenclature	128
Physical properties of alcohols and phenols	132
Important alcohols	134
Preparation of alcohols	137
Reactions of alcohols	138
Reactions involving O-H bond breaking	138
Reactions involving C-O bond breaking	140
Polyhydroxy alcohols	140

Properties of phenols	143
Reactions of the O-H group of phenols	148
Reactions of the benzene ring of phenols	149
CHAPTER 7	
ETHERS AND ORGANIC SULFUR COMPOUNDS	151
Ethers	151
Preparation of ethers	151
Reactions and properties of ethers	151
Aromatic ethers	152
Organic sulfur compounds	153
CHAPTER 8	
ALDEHYDES AND KETONES	158
Nomenclature of aldehydes and ketones	158
Physical properties of aldehydes and ketones	160
Preparation of aldehydes	161
Preparation of ketones	162
Reactions of carbonyl compounds	162
Nucleophilic addition to the carbon-oxygen double bond	164
Hydrogen cyanide addition	166
Sodium bisulfite addition	167
Formation of acetals	167
Formation of Schiff-base	168
Keto-enol tautomerism	169
Enols in biochemistry	171

The aldol addition: the addition of enolate ions to aldehydes and ketones	172
Aldol additions in biochemistry	174
Important aldehydes and ketones	175
Quinones	177
CHAPTER 9	
NITROGEN-CONTAINING ORGANIC COMPOUNDS	
Amines	181
Classification of amines	181
Structure of amines	183
Nomenclature of amines	183
Physical properties of amines	185
Basicity of amines	185
Amine salts	189
Preparation of amines	190
Reaction of amines	191
Reactions of amines with nitrous acid	191
Heterocyclic amines and bases	194
Fused heterocyclic aromatic systems	196
Derivatives of heterocyclic compounds	197
Pyrimidine and purine bases	201
Amines of biological importance	204
Hormones and neurotransmitters	204
Polyamines	206
Alkaloids	207
The sulfa drugs: sulfanil amide	211

## CHAPTER 10

CARBOXYLIC ACIDS	215
Nomenclature of carboxylic acids	217
Physical properties of carboxylic acids	222
Acidity of carboxylic acids	223
Preparation of carboxylic acids	234
Reactions of carboxylic acids	235
Important carboxylic acids	236
Fatty acids	237
Prostaglandins	239
Fats	240
Detergents	243
Dicarboxylic acids	246
Naturally occurring hydroxy acids	250
Keto-acids (oxo-acids)	254
Unsaturated acids	255

## CHAPTER 11

CARBOXYLIC ACIDS DERIVATIVES	257
Esters	257
Synthesis of esters: esterification	259
Base-promoted hydrolysis of esters: saponification	261
Lactones	261
Carboxylic acid anhydrides	263
Synthesis of carboxylic acid anhydrides	263
Acyl chlorides	265
Synthesis of acyl chlorides	265

Amides	266
Synthesis of amides	268
Hydrolysis of amides	271
Dehydration of amides	271
Lactams	272
$\alpha$ -Halo acids	274
Thiol esters	274
CHAPTER 12	
STEREOCHEMISTRY	277
Isomerism: structural isomers and stereoisomers	277
Enantiomers and chiral molecules	279
Symmetry elements: planes of symmetry	280
Properties of enantiomers: optical activity	282
Plane-polarized light	283
The polarimeter	284
Specific rotation	285
Racemic modifications	287
Absolute and relative configuration: designation of chirality by R and S, and by D and L	287
Diastereoisomers	293
The synthesis of enantiomers	295
Separation of enantiomers from racemic mixtures	297
REVIEW QUESTIONS	302
