

Chemistry of Complex Equilibria

M. T. Beck Ph. D., D. Sc.

Member of the Hungarian Academy of Sciences
Professor of Physical Chemistry
Kossuth Lajos University
Debrecen, Hungary

I. Nagypál Ph. D., D. Sc.

Professor of Physical Chemistry
József Attila University
Szeged, Hungary

Akadémiai Kiadó · Budapest 1990

Contents

Preface to the first edition	ix
Preface to the second edition	xi
Chapter 1 Introduction	1
References	6
Chapter 2 Complex equilibria and equilibrium constants	7
2.1 Types of complex equilibria in solution	7
2.2 Types of complex equilibrium constants	11
2.3 Equilibrium constants involving concentrations and activities	14
2.4 The concept of microconstants	20
2.5 The lower and upper limits of stability constants	22
References	24
Chapter 3 General characterization of complex equilibrium systems	25
3.1 Introduction	25
3.2 Definitions, basic equations	27
3.3 Transformation of the composition matrix	31
3.4 Description of interactions of components	34
3.4.1 One-component systems	34
3.4.1.1 Dimerization of one component	36
3.4.1.2 Di- and trimerization of one component	37
3.4.1.3 Polymerization of one component	39
3.4.2 Two- and multicomponent systems	41
3.5 The complex formation function	44
3.5.1 The formation function for stepwise association	44
3.5.1.1 Definitions, basic equations	44
3.5.1.2 Statistical considerations	48
3.5.1.3 Characteristic points of the formation curve	54
3.5.1.3.1 Half-value points of the formation curve	54
3.5.1.3.2 Integer points of the formation curve	58
3.5.2 Formation function of polynuclear complexes	59
3.6 Rules of concentration distribution in complex equilibrium systems	61
3.6.1 Introduction	61

3.6.2	Two-component systems	61
3.6.2.1	Concentration distribution during stepwise complex formation	61
3.6.2.2	Concentration distribution when polynuclear complexes are formed	70
3.6.3	Three-component systems	74
3.6.4	Unusual concentration distribution in three-component systems	78
3.6.4.1	Classification of three-component systems	79
3.6.4.1.1	The number of two-component subsystems	79
3.6.4.1.2	Additivity of subsystems	80
3.6.4.1.3	Symmetry and asymmetry	80
3.6.4.2	Mathematical considerations	81
3.6.4.3	Further analysis of rules of unusual concentration distribution	85
3.6.4.3.1	Stoichiometric asymmetry in mixed ligand equilibrium systems	85
3.6.4.3.2	Stoichiometric asymmetry due to polynuclear complex formation	87
3.6.4.3.3	General asymmetry of the H-L-Me systems	89
3.6.4.3.4	Thermodynamic asymmetry	98
3.6.4.3.5	Model system with five extrema	101
3.6.4.4	Algorithm of the analysis of concentration distribution	102
3.6.4.5	Conclusions	103
	References	103
Chapter 4	Experimental methods	106
4.1	Measurement of colligative properties	107
4.2	Optical methods	109
4.2.1	Photometric study of two-component systems	110
4.2.1.1	The continuous variation method	112
4.2.1.2	The mole ratio methods	118
4.2.1.3	The method of corresponding solutions	121
4.2.1.4	The method of stoichiometric dilution	123
4.2.1.5	Photometric study of ligand protonation	124
4.2.2	Photometric study of systems with three or more components	126
4.2.2.1	Photometric study of mixed complexes of non-protonating ligands	126
4.2.2.2	Study of the Me-L interaction in three-component equilibrium systems	
	H-L-Me	132
4.2.2.2.1	Measurements at constant pH	132
4.2.2.2.2	Photometric measurements as a function of pH	134
4.2.2.3	Competition methods	136
4.3	NMR and ESR methods	141
4.3.1	Equilibrium measurements relating to slow exchange	142
4.3.2	Equilibrium measurements relating to fast exchange	147
4.3.3	Simultaneous determination of equilibrium and kinetic constants	153
4.4	Calorimetry	153
4.5	Determination of equilibrium constants via kinetic measurements	159
4.5.1	Stoichiometric (uncatalysed) reactions	160
4.5.2	Catalytic reactions	162
4.5.2.1	Ligand catalysis	162
4.5.2.2	Metal ion and complex catalysis	163

4.5.2.3	Central atom exchange reactions	165
4.6	Extraction methods	166
4.6.1	Partition of the ligand	167
4.6.2	Partition of the metal complexes	168
4.6.3	Competitive extraction	170
4.6.4	Synergism and antagonism	174
4.6.5	Specific problems of extraction equilibrium studies	178
4.7	Solubility studies	181
4.7.1	Study of two-component systems	186
4.7.2	Competition solubility studies	187
4.8	Study of ion-exchange equilibria	188
4.8.1	Application of cation-exchangers	189
4.8.2	Application of anion-exchangers	190
4.9	Potentiometry	192
4.9.1	pH-metric equilibrium studies	194
4.9.1.1	Calibration of the electrode system	195
4.9.1.2	Planning of pH-metric measurements	197
4.9.1.2.1	Determination of protonation constants	198
4.9.1.2.2	pH-metric study of formation equilibria of metal complexes	200
4.9.2	Application of metal and ion-selective electrodes	213
4.9.3	Measurements with two electrodes	219
4.10	Polarography	220
4.11	Other methods	223
	References	226
Chapter 5 Evaluation of experimental data		243
5.1	Determination of compositions of complexes formed	244
5.1.1	Experimental considerations	244
5.1.2	Applications of auxiliary functions	245
5.1.2.1	Application of the formation function	246
5.1.2.2	Application of other auxiliary functions	254
5.1.3	Direct methods	260
5.2	Computer evaluation of equilibrium measurement data	263
5.2.1	Historical survey	264
5.2.2	Evaluation methods based on auxiliary functions	265
5.2.3	Calculation of equilibrium concentrations	267
5.2.3.1	Calculation of equilibrium concentrations when the stability constants are known	267
5.2.3.2	Calculation of the equilibrium concentrations when the equilibrium model is unknown	270
5.2.4	Calculation of formation constants	273
5.2.4.1	Selection of the function to be minimized	274
5.2.4.2	Checking and evaluation of the goodness of fitting	276
5.2.4.3	Estimation of errors in constants	279
5.2.5	Determination of microconstants	280
	References	282

Chapter 6 Factors determining the compositions and stabilities of metal complexes	287
6.1 Solvation and complex formation	288
6.2 The hydration numbers of ions and the stabilities of aqua complexes	294
6.3 Water as a component of complex formation equilibria	298
6.4 Classification of metal complexes on the basis of composition	303
6.5 The chelate effect and the macrocyclic effect	309
6.6 Factors determining the ratios of the equilibrium constants	315
6.6.1 Statistical considerations	316
6.6.2 The statistical considerations in practice	321
6.6.3 Specific factors influencing the ratios of the constants	326
6.6.3.1 Structural changes	326
6.6.3.2 Interaction between coordinated ligands	329
6.7 Factors determining the values of stability constants	333
6.7.1 Critical evaluation of stability constants	334
6.7.2 Effects of external factors on the values of stability constants	335
6.7.2.1 Roles of ionic strength and the ionic medium	335
6.7.2.2 Effect of temperature	341
6.7.2.3 Effect of pressure	344
6.7.3 Connection between equilibrium constants and parameters describing the properties of the central ion and the ligand	345
6.7.3.1 Connection between metal ion properties and complex equilibrium constants	346
6.7.3.1.1 Effect of ionic radius	346
6.7.3.1.2 Effect of ionization potential and electronegativity	346
6.7.3.1.3 Effect of electronic configuration of metal ion	348
6.7.3.2 Connection between donor atom properties and complex equilibrium constants	351
6.7.3.3 Interpretation of formation constants via the hard-soft theory	351
6.8 Correlations of equilibrium constants	354
6.8.1 Paradoxes in correlations	355
6.8.2 Correlation between protonation constants of ligands with similar structures and the formation constants of their complexes	357
6.8.3 Correlation between stability constants of complexes of two metal ions with ligands with similar structures	360
6.8.4 Correlation between formation constants of two ligands with similar structures with different metal ions	362
6.8.5 Other correlations	363
6.9 Equilibrium conditions of outer sphere complexes	364
6.10 Equilibrium conditions in mixed metal complexes	366
